TBAc™ VOC-exempt\* solvent is the sustainable solution for performance and compliance.

TBAC (tertiary butyl acetate) solves many of the compliance issues facing manufacturers and end-users of formulated products without affecting performance or the bottom line.

A versatile, non-HAP, VOC-exempt, SNAP-approved, non-ODS, non-GHG ester solvent, it can be used in solvent-based coating, inks, adhesives, industrial cleaners and degreasers.

It replaces toluene, xylene, ketones, esters and other VOC and HAP solvents in your process and formulations and does not require new storage, application, curing or heating equipment.

If you are looking for a greener solvent and a sustainable solution to your performance or compliance problems, TBAc™ solvent may be the answer you have been looking for.

Come visit us at [www.tbac.com](http://www.tbac.com) or contact us at [tbac@lyondellbasell.com](mailto:tbac@lyondellbasell.com)

\*TBAC is now VOC-exempt in most states. Please check with your state and local regulatory agencies to ensure that they recognize the US EPA VOC definition in 40 CFR 51.100 (s) or call us at 610-359-2411 or [tbac@lyondellbasell.com](mailto:tbac@lyondellbasell.com)
