### Edison Plant

- I Manufactures polyethylene and polypropylene catalysts
- I Plant encompasses 100 acres
- I More than 50 employees on site

The Edison Plant manufactures the company's Avant ZN catalysts used in the production of polypropylene plastic resins. The plant borders the Raritan River and encompasses 100 acres, 25 of which are developed. It has been a manufacturing site since 1929, but has changed products and ownership many times. It is now a state-of-the-art manufacturing facility serving as the supplier of polyethylene and polypropylene catalysts to the company's customers worldwide.

The site also shares a facility owned by W. R. Grace for the preparation of custom catalysts and components. LyondellBasell provides maintenance, logistics, training and site safety services, but the two companies hold separate environmental and regulatory permits.

### Economic Impact

Our site is a significant contributor to the local economy by providing skilled jobs, purchasing local goods and services and by paying taxes to support local schools and government services.

### Community Outreach

Our employees are encouraged to be actively engaged in the local community. They can be found serving as firefighters, science-fair judges, Scout leaders and coaches. Employee volunteers also regularly participate in LyondellBasell's annual Global Care Day, a day in which thousands of company volunteers at sites around the globe make a difference by participating in local community service projects. They have also adopted the local boat basin on the Raritan River and periodically conduct litter clean-ups at that site.

Our employees also open their hearts and wallets to charitable community organizations and contribute generously to the United Way through a payroll pledge campaign.

### Social Responsibility

Because of our dedication to sustainable prosperity, we operate our facilities in a manner that protects people and the environment. Through our culture of Operational Excellence, LyondellBasell companies are committed to continuous improvement in safety and environmental performances. We continuously explore ways to operate our facility in a more energy-efficient manner.

The site has earned accolades for safety performance from numerous organizations, including the New Jersey Manufacturers Association (Governor's Award and Beacon of Safety Award) and OSHA. As a STAR site for many years in OSHA's Voluntary Protection Programs, the Edison Plant has been recognized by OSHA as ranking in the top tier of industry for safety processes and performance.

Like many other chemical facilities in New Jersey, our Edison Plant is subject to annual on-site audits by the New Jersey Department of Environmental Protection covering areas of process safety and emergency preparedness. Our site has successfully passed these multi-day audits each year since they began in 1989.

### About LyondellBasell
