

High-performance polyolefin and styrenic compounds

For extrusion and thermoforming applications

A premium surface finish

Your customers can count on long-lasting protection against chips and scratches with our LYB high-performance polyolefin and styrenic compounds. Our innovative solutions enable paintable and paint-free applications that look as good as they last – even in the harshest outdoor environments. And last they will, with fade-resistant color retention and stain resistance, combined with a strength that goes right through to the core.

The flexibility and the versatility of these remarkable materials make them a cost-effective replacement for many traditional materials, allowing you to differentiate and customize your applications.

The secret is in the science

These weatherable polymers are the future of surface finish technology and an innovative approach to Class "A" decorative surfaces. This patented thermoplastic olefin technology is suitable for a variety of processes, including thermoforming, film and sheet extrusion and profile extrusion. Parts formed from these resins exhibit high resistance to bubbling, chipping, staining and fading and provide superior color and product protection.

These materials are based on TPO, ASA, ASA/PC and ASA/AES polymers and offer a broad range of engineered properties that can be customized for your unique application needs. They offer exceptional UV resistance, lasting durability, extreme toughness, paintability and excellent color retention, and they are available in a broad range of gloss levels and custom colors.

Your materials of choice

The LYB polyolefin and styrenic compounds offer superior advantages over conventional materials including painted metal or plastic, laminated paint films, acrylic laminates and coatings:

- High-quality appearance with mold-in-color technology and paintable applications for class "A" finishes
- No chipping or cracking – even in extreme temperatures or high-stretch thermoforming processes
- Process versatility
- Customized color and color-matching
- Cost-effective performance
- Designed for recycling

Product information

Enhanced polyolefin and styrenic polymer systems

Markets/applications

Agriculture and heavy equipment

Resistance to fading from environmental exposure, as well as protection from fertilizers, pesticides and other chemicals, make these polymers perfect for combines, tractors and other large farm machinery. Another added benefit is a higher tolerance toward cracking under vibrational loads. Enhanced polyolefins can be applied to a variety of applications including roof, hood, fender and other body panels.

RV, heavy truck and bus

Enhanced polyolefins are suitable for large transportation applications such as heavy trucks, buses and RVs. Side and roof panels, bumper covers, fender skirts, AC shrouds, propane tank covers, nose cones and interior decorative finishes are just some of the many applications in this market.

Power sports

Snowmobiles, ATVs, jet skis and motorcycles are all perfect applications for enhanced polyolefins which are not only impact-resistant, flexible, durable and ductile under sub-zero temperatures but also lightweight and fade-resistant. Side panels, wheel covers, hood panels and other areas are a great fit for these polymers.

Industrial components

Stiffness, ductility and resistance to weather, chemicals, stress and vibrational cracking make enhanced polyolefins ideal for shrouds, housings and panels in high abuse environments.

Personal watercraft

Power and pontoon boats along with kayaks all benefit from enhanced polyolefins which are lightweight, durable and can withstand constant environmental exposure. Applications can range from interior consoles and headliners to rail skirts and storage compartments.

Lawn and garden

Personal use lawn and garden equipment, such as mowers and garden tractors, gains added resistance from chipping, cracking and bubbling by using enhanced polyolefins. These polymers are ideal for applications like wheel wells, vehicle hoods and body panels.

Automobile

LYB provides comprehensive color-matching capabilities, catering to a broad spectrum of automotive market needs, from solid shades to pearlescent and metallic finishes.

Select the LYB capstock grade that's right for you

These capstock resins provide many exciting benefits in performance and appearance with a broad range of gloss levels depending on your application requirements

About us

We are LyondellBasell (LYB) – a leader in the global chemical industry creating solutions for everyday sustainable living. Through advanced technology and focused investments, we are enabling a circular and low carbon economy. Across all we do, we aim to unlock value for our customers, investors and society. As one of the world's largest producers of polymers and a leader in polyolefin technologies, we develop, manufacture and market high-quality and innovative products for applications ranging from sustainable transportation and food safety to clean water and quality healthcare. For more information, please visit www.lyb.com or follow [@LyondellBasell](#) on LinkedIn.

Before using a product sold by a company of the LyondellBasell family of companies ("LyondellBasell"), users should make their own independent determination that the product is suitable for the intended use and can be used safely and legally.
