Founded in the 1990s, the Community Advisory Panel to LyondellBasell and Equistar (CAPLE) meets eight times a year to discuss site operations, complex environmental performance, and emergency response.

The mission of CAPLE is to provide an ongoing dialogue between the LyondellBasell Channelview Complex and the surrounding community. CAPLE will promote substantive two-way communication on community and/or company concerns, including health, safety, and the environment. This communication will be directed to specific actions. The goal is to develop mutual understanding, trust and partnership between industry and the community that will enhance the quality of life in the area.

The meeting is open to members of the Channelview, Crosby and Highlands communities. The group meets approximately eight times yearly in January, February, April, May, August, September, October and November. Meetings times vary each month. For more information on CAPLE, email [CAPLEFacilitator@gmail.com](mailto:CAPLEFacilitator@gmail.com)

The LyondellBasell Channelview Complex covers approximately 4,000 acres and is one of the largest petrochemical facilities on the Gulf Coast. The original complex property was purchased in 1920 by a World War I veteran from Chicago who moved to the banks of the San Jacinto River to develop a private membership-based recreational club and park, including lush picnic grounds, a clubhouse and cabins.

The Channelview Complex is about 20 miles east of downtown Houston and has been part of the North Channel community since 1957. There are approximately 2,000 employees and contractors at the site.

The olefin units at the north side facility manufacture ethylene, propylene, butadiene and benzene. The south side facility uses these products to produce propylene oxide, styrene

monomer, other derivatives, and gasoline-blending products. CVO is also home to one of the world's largest propylene oxide and tertiary butyl alcohol (PO/TBA) plants.

LyondellBasell combines teams of highly skilled employees with some of the world's finest manufacturing equipment to produce the basic building blocks for products that people use every day, such as clothing, food packaging, household furnishings, automotive parts and home building materials.

The Channelview Complex focuses on the safety of the community, its operations and its employees. The complex aims for zero injuries, zero process, product and environmental safety incidents and zero plastic pellet loss to the environment. The LyondellBasell GoalZERO standards apply to all employees, contractors and suppliers performing work at the sites.

This complex is an integral part of the Channelview area's economy. It provides good-paying jobs, property taxes and donations. Among the agencies and organizations supported by Channelview Complex are Channelview, Sheldon and Crosby/Huffman school districts, Channelview and Crosby fire departments, Greens Bayou Coalition, North Channel Rotary Club and North Channel Chamber of Commerce. In addition to donating time and money, the site connects and engages with community representatives through its Community Advisory Panel.
