

Channelview community update

Neighbor questions, straight answers

We hear good questions from our neighbors at CAPLE meetings, community events and through calls to our hotline. In this column, we are answering one we often hear from drivers along Sheldon Road.

If you drive along Sheldon Road, you may notice what looks like a large cloud near the north plant cooling towers. We understand why that can get your attention, especially when fog alert signs are posted nearby.

The cloud you see is steam or water vapor, not smoke. The cooling towers help cool and reuse hot water from our units. As part of that normal process, some water evaporates and becomes visible, much like fog or clouds in the sky.

What you see can change with the weather. On cooler or more humid days, the water vapor may look thicker or stay visible longer. When conditions could affect visibility near the road, fog alert signs remind drivers to slow down and use extra caution.

If you see, hear or smell something near the site and want to know more, the CAER Online app is a good place to start. The app shares community updates and information from local industry. You can also contact our Channelview team directly with questions.

Have a question or concern you would like us to answer in a future column? Send it to the Channelview team at askchannelview@lyb.com.

Why do I sometimes see large steam clouds and fog alert signs near Sheldon Road?

Channelview Complex marks Global Safety Day

Global Safety Day gave Channelview Complex employees and contractors time to pause and focus on what matters most, going home safely at the end of the day. The site joined LYB locations around the world June 11 for the annual event. This year's theme was Commit to GoalZERO.

The morning included remarks from site leaders, vendor booths, prizes, games and hands-on activities that helped make safety feel practical and personal. CEO Peter Vanacker also joined the program and reminded employees that safe choices, open conversations and looking out for one another matter every day.

Community corner

Channelview Complex helped local students get ready for the new school year by supporting two school supply efforts this summer. At Channelview ISD, the site contributed to a backpack drive that provided 2,000 backpacks for students. Team members also helped hand out supplies and greet families.

Community corner

Employees also supported an internal school supply drive for Crosby ISD. With additional support from the Complex, the effort provided crayons, glue, pencils and play dough to help students start the year with the tools they need.

In partnership with Harris County Precinct 3, the Complex also supported three summer camps at the Crosby, Barrett and Highlands community centers. The camps gave local kids a fun, safe place to learn, play and stay active during the summer.

Community corner

The Complex also joined the Crosby/Huffman Chamber of Commerce in supporting new teacher luncheons for Crosby ISD and Huffman ISD. These events welcomed educators to the community and gave us a chance to say thank you before the school year begins.

Who we are

The LyondellBasell Channelview Complex is comprised of two sites – Channelview North and Channelview South. Combined, the complex has approximately 2,200 employees and contractors and is one of the company's largest operating sites. Opened in 1957, the site spans nearly 4,000 acres. The raw materials produced at Channelview Complex are used in everyday goods, including automobiles, home furnishings, food packaging, automotive fuels and flexible piping.
